SUMMARY

Self-taught developer with 7 years of personal projects, strongest in Python, also C#/.NET and Unity. I build and run complete systems: a Discord bot, its database and web UI, and the homelab it runs on. Since 2026 I design and direct AI-assisted builds, including a text classifier I trained myself.

TECHNICAL SKILLS

Languages	Python (strongest), C#, SQL (CTEs, window functions), PowerShell, bash
Frameworks	discord.py (async, event-driven), .NET 6, Discord.NET, Unity, SetFit / PyTorch
Data & web	PostgreSQL, SQLite, JSON APIs, webhooks with HMAC verification, nginx, Let's Encrypt
Infra & tools	Arch Linux, Proxmox VE, ZFS, TrueNAS, Git and GitHub (branches, PRs, merges), AI coding assistants

PROJECTS

HAND-WRITTEN (2019–2025)

Astrabot and theaBot — Python Discord bot and its C# rewrite · github.com/theruvial/Astrabot 2019 – present

- Built Astrabot as an async, event-driven discord.py bot on SQLite/PostgreSQL with reaction roles, a points economy on an append-only ledger, a shop and task tracking; wrote SQL by hand, including a window-function CTE.
- Rewrote it in C# as theaBot (2022): .NET 6, Discord.NET, dependency injection and slash commands.
- Extended Astrabot in 2026 (AI-assisted) with an audiobook request site with email notifications, a `/wiki` command and cogs that hot-reload their own updates from GitHub.

Aboard the Astra — co-op multiplayer Unity game, 4-person team · C# 2020 – 2021, resumed 2026

- Wrote 247 commits: boss AI and cutscenes, status effects, a combat overhaul and client/server sync fixes.

Rouge — turn-based Unity game, 5-person team (work in progress) · C# 2023 – 2025

- Wrote 380+ commits and merged 44 pull requests: hero abilities, status effects, items, traits and a JSON save system.

DIRECTED WORK (2026, AI-ASSISTED: I DESIGNED IT AND DIRECTED AI CODING TOOLS)

AstraThought — task classifier · Python, SetFit, PyTorch · github.com/theruvial/AstraThought 2026

- Trained it myself on 1,911 hand-labelled messages: 98% precision and 92% recall on 60 real messages it never saw. Unsure calls go to human review, and rulings become new training labels.

Mechanics wiki, Aboard the Astra Remake — Python, HTML/CSS/JS 2026

- 19-page wiki generated from the game's source; backend with fail-closed shared-secret auth and HMAC-verified GitHub webhooks.

INFRASTRUCTURE

Homelab and Linux — self-run · Proxmox VE, ZFS, nginx, Arch Linux ongoing

- Proxmox VE with TrueNAS and Ubuntu Server VMs on ZFS (did the 8 → 9 upgrade myself); nginx reverse proxy with Let's Encrypt; Pi-hole + Unbound DNS.
- Arch Linux as my main OS for 4+ years on Btrfs with snapshots, recovered many times from broken NVIDIA driver updates.

EXPERIENCE

Delivery Station Associate — Amazon Oct 2025 – present

- Filed 42 safety reports in 12 months, all resolved, including an OSHA electrical violation (fixed the next day) and an EV with a disconnected airbag connector (fixed the same day).

Overnight Shift Manager — McDonald's 2024 – Oct 2025

- Promoted to main overnight manager of a 24-hour store within a year; ran a crew of 2–4, trained new crew, and handled the safe and cash counts with no discrepancies.

Automotive Service Technician — Nissan of Clearwater (2021 – 2022), Infiniti of Clearwater (2014 – 2021) 2014 – 2022

- Supervised two technicians and dispatched their work; diagnosed 12-volt electrical faults from wiring diagrams; wrote repair orders in CDK.

EDUCATION

GED — Florida Department of Education, New Port Richey · self-taught in software development since 2019 2023
