# Thea Arcadia

**Junior Software Developer · Python · C# · Automation**

New Port Richey, FL · open to remote · theruvial237@gmail.com

linkedin.com/in/theaarcadia · github.com/theruvial · theruvial.com

## SUMMARY

Self-taught developer with 7 years of personal projects, strongest in Python, also C#/.NET and Unity. Experienced building and running complete systems end to end: a Discord bot, its database and web UI, and the homelab it runs on. Since 2026, also designing projects and directing AI coding tools to build them, including a self-trained text classifier.

## TECHNICAL SKILLS

| | |
|---|---|
| **Languages** | Python (strongest), C#, SQL (CTEs, window functions), PowerShell, bash |
| **Frameworks** | discord.py (async, event-driven), .NET 6, Discord.NET, Unity, SetFit / PyTorch |
| **Data & web** | PostgreSQL, SQLite, JSON APIs, webhooks with HMAC verification, nginx, Let's Encrypt |
| **Infra & tools** | Arch Linux, Proxmox VE, ZFS, TrueNAS, Git and GitHub (branches, PRs, merges), AI coding assistants |

## PROJECTS

### HAND-WRITTEN (2019–2025)

**Discord bot and its C# rewrite** — Astrabot and theaBot · github.com/theruvial/Astrabot 2019 – present

- Built Astrabot in discord.py (async, event-driven) on SQLite/PostgreSQL: reaction roles, a shop, task tracking and a points economy on an append-only ledger, with SQL written by hand, including a window-function CTE.
- Rewrote it in C# as theaBot (2022): .NET 6, Discord.NET, dependency injection and slash commands.
- Extended it in 2026 (AI-assisted): an audiobook request site, a `/wiki` command and cogs that update themselves from GitHub.

**Co-op multiplayer Unity game** — Aboard the Astra · 4-person team · C# 2020 – 2021, resumed 2026

- Wrote 247 commits: boss behaviours and cutscenes, status effects, a combat overhaul and client/server sync fixes.

**Turn-based Unity game** — Rouge · 5-person team (work in progress) · C# 2023 – 2025

- Wrote 380+ commits and merged 44 pull requests: hero abilities, status effects, items, traits and a JSON save system.

### SELF-DESIGNED, BUILT WITH AI CODING TOOLS (2026)

**Task classifier** — AstraThought · Python, SetFit, PyTorch · github.com/theruvial/AstraThought 2026

- Trained the model on 1,911 hand-labelled messages; it scores 98% precision and 92% recall on 60 real messages it never saw. Unsure calls go to a human, and each ruling becomes new training data.

**Game mechanics wiki** — Aboard the Astra Remake · Python, HTML/CSS/JS 2026

- Generated a 19-page wiki from the game's source code. The backend rejects any request without its shared secret and checks GitHub webhook signatures with HMAC.

### INFRASTRUCTURE

**Homelab and Linux** — self-run · Proxmox VE, ZFS, nginx, Arch Linux

- Proxmox VE with TrueNAS and Ubuntu Server VMs on ZFS, including the Proxmox 8 → 9 major upgrade; nginx reverse proxy with Let's Encrypt; Pi-hole + Unbound DNS.
- Arch Linux as main OS for 4+ years on Btrfs with snapshots, repeatedly recovering it from broken NVIDIA driver updates.

## EXPERIENCE

**Delivery Station Associate** — Amazon Oct 2025 – present

- Filed 42 safety reports in 12 months, all resolved, including an OSHA electrical violation (fixed the next day) and an electric delivery van with a disconnected airbag connector (fixed the same day).

**Overnight Shift Manager** — McDonald's 2024 – Oct 2025

- Promoted to main overnight manager of a 24-hour store within a year; ran a crew of 2–4, trained new crew, and handled the safe and cash counts with no discrepancies.

**Automotive Service Technician** — Nissan of Clearwater (2021 – 2022), Infiniti of Clearwater (2014 – 2021) 2014 – 2022

- Supervised two technicians and dispatched their work; diagnosed 12-volt electrical faults from wiring diagrams; wrote repair orders in CDK.

## EDUCATION

**GED** — Florida Department of Education, New Port Richey 2023

**Self-taught programming** — Python via *Automate the Boring Stuff* 2019 – present
